I've been following this thread for awhile, and am quite curious
about these expenses. Is this "leagle" a dog, like a "beagle",
or a bird, like an "eagle", and why are they expensive?

And this stream we are talking about ... it is gone now?

"Ah, so like an expired stream is the beagle."

I agree. I do it sometimes myself. Particularly in an area close
(coordination wise) but where I can't hit the repeater. (Again UHF is MY
band of choice for this. Low power simplex with no INTENT to interfere
and accepting interference from the (coordinated) repeater is basically
in compliance with Part 97 (band plan excepted).

Why? Are they advocating 13 or 20 WPM testing?

As long as it is just as wrong to criticize JUNIORS for being boring...

Fair is fair.

And why would only Generals or higher know it?

Dan (yes THAT one)

No, 40m is not allowed for remote control. Six meters is, and that's
why it's used for that. Check into Part 97 rather than going by what
people say, since it's the FCC you ultimately have to deal with.

Just listen to 28.325 from time to time and wait for the
"Texas mush-mouth" to come on the air. You'll hear not only the
baddies but about everything else slimy and disgusting, too.

Destinated, I believe, means to be appointed to a position. So next time
you hear "I'm destinated" you might ask to what position.

They don't need licenses anymore.

I *think* you are making an issue of this because you are confusing the fact

that XM calls were supplied to Amateur Radio Operators while VE3's ran out,
and that XM calls *used* to be used for CBers.

Please do, since it would seem there are many general class or higher
licensees who do *not* know this... Why must he know if he is a general or
higer class Ham??
